

### Information

A carbon footprint is the total amount of greenhouse gases (including carbon dioxide and methane) that are generated by our actions. The average carbon footprint for a person in the United States is 16 tons, one of the highest rates in the world. Globally, the average carbon footprint is closer to 4 tons.

In this article, It is mentioned that Alexandra Shimo-Barry, author of “The Environment Equation,” has come up with a formula that explains how to calculate your carbon footprint at home. We have used similar methods to calculate your Carbon footprint.
